

IMMSS Contract Information

Innerspace is proud to manage the IMMSS contract for Haworth with dedicated in house Project Managers and Designers with decades of experience designing product solutions that perform in all healthcare settings. Our team works to provide systems furniture solutions that work in clinical, administrative, pharmaceutical, laboratory, and nurses' stations. We provide the highest quality product solutions at the lowest price point under the IMMSS contract.

The Integrated Modular Medical Support System (IMMSS) is designated to support the Army Medical Command (MEDCOM) facilities worldwide. This program allows the U.S. Army Corp of Engineers – Huntsville Center to process delivery orders for IMMSS products, design, installation and related services through a streamlined and efficient process using a negotiated contract between the Huntsville Center and Haworth.

Contract number: W912DY-10-A-0008 Effective: July 9, 2010, through July 8, 2020

Haworth along with it's strategically aligned manufacturing partners provide a wide range of products through the IMMSS contract to allow for fully integrated facility solutions. Our turn-key facility solutions are built to flex allowing us to accommodate changing functional requirements of spaces to support innovations in medical technology.

Haworth takes a modular approach, allowing the product to be relocated anywhere within the facility, avoiding obsolescence due to changes of operation, equipment, and personnel needs. Nearly all the solutions we provide can be repurposed in various ways allowing the furniture to grow with the facility's needs. Healthcare is always evolving and we are here to provide products that evolve and change while supporting the long term sustainable needs of each unique facility.

IMMSS

Department of Defense JSN Typicals
